Internet Hotspot Solutions for Trade Shows

Wireless Internet access is an essential part of doing business for trade show participants and visitors. Booth owners want Internet access to stay in touch with their offices and get access to business information that visitors ask about. Visitors also want wireless Internet for their smartphones.

Even though many people have 3G/4G smartphones with Internet access, large events such as trade shows usually swamp cell phone towers, limiting Internet access.

Wireless Internet service can be bundled with the booth costs to attract businesses to show their products. Booth owners can have free Internet access while visitors can be charged for Internet access using the gateway credit card billing feature.
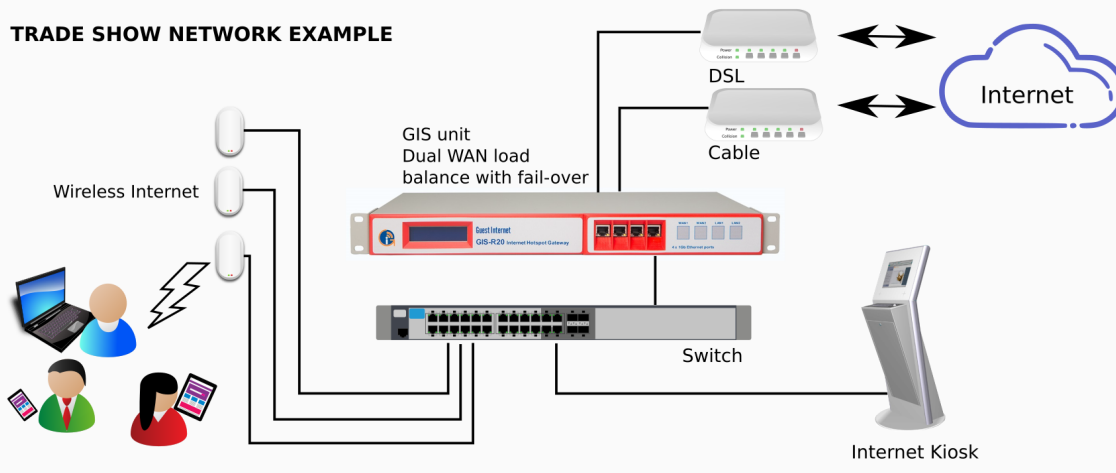

Rent booth space quicker while covering costs: provide free Internet for booth owners and cover the cost by charging visitors for Internet use.

Our gateway products include many management features essential for trade show Internet services. Features include bandwidth limiting, peer-to-peer blocking, content filtering and virus blocking.

Comprehensive reporting includes daily and monthly usage, and billing reports with transaction charges.
